

# **Oceano Community Services District Water Rate Analysis**

**July 2025**

July 2025

## Water Rate Analysis - Oceano Community Services District (OCSD)

### Purpose

The purpose of this report is to summarize the “Revenue Requirements” needed to fund the operations, maintenance, capital and other costs of the OCSD water system and to determine an increase in water rates needed to generate those revenues. It provides reasons for the proposed rate increase and the basis for the calculations used to develop the proposed rate increase, which include but are not limited to, the following:

- Reasons for the proposed rate increase include the following:
  - To generate revenues necessary to cover the District’s capital improvement program costs in the Water Fund, including recovering from deferred maintenance of the system.
  - To provide sufficient funding to pay for the total costs of providing water service, including anticipated increases to the District’s Lopez and State Water Supply costs to the customers of OCSD, as well as escalating labor and construction costs.
  - To provide sufficient funding to maintain a minimum reserve balance of at least three months (90 days) cash needs, capital reserves, and emergency reserves.
- The basis for calculations includes the following:
  - The current 2024-25 Water Fund budget.
  - A proforma projection of increased water rates in covering system expenses and reserve requirements throughout the five-year rate period.
  - The 2025 Financial and Rate Setting Policies

### Background

The OCSD was created in 1981 and provides potable water to the residential, commercial and public customers in the community. Oceano is located in the unincorporated area on the south coast of San Luis Obispo County, adjacent to the cities of Grover Beach and Arroyo Grande. The OCSD encompasses approximately 1,150 acres with elevations ranging from sea level to approximately 100 ft. The OCSD water enterprise serves approximately 2,200 connections with a population of approximately 7,700. The system consists of two water storage and treatment tanks, two active groundwater wells, and twenty-two miles of pipeline that can deliver from both of the District’s surface water supplies.

### Sources of Water Supply

The OCSD water supply includes the following three sources.

- 900 acre feet per year of groundwater supply is allocated to OCSD from the Northern Cities Management Area (NCMA) of the Santa Maria Valley Groundwater Basin. The groundwater basin is managed based on stipulations resulting from adjudication of the basin. The NCMA is encouraging reductions in groundwater pumping due to concerns over groundwater levels, and the safe yield may be reduced in the future.
- 303 acre feet per year of surface supply is allocated from Lopez Dam and Reservoir, which is owned and operated by the San Luis Obispo County Flood Control and Water Conservation District (Flood Control District). Actual deliveries can be increased when “surplus water” is available, and they can be decreased during droughts and for other reasons that reduce the supply of available water. Future reductions in availability and increases in supply are anticipated during this rate period as a result of on-going Endangered Species Act litigation.
- 750 acre feet per year of surface water supply is allocated from the State Water Project (SWP). The SWP is owned and operated by the State of California Department of Water Resources (DWR) and delivered based on contracts with the Flood Control District. DWR is delivering 40% of the statewide allocations in 2025. The Flood Control District has been able to provide supplies greater than the DWR allocation, but concerns exist over the reliability of the SWP and its ability to provide supplies on an annual basis. Additionally, the Delta Conveyance Project is anticipated to continue to move forward and add to ongoing State Water procurement costs.

In summary, each of the OCSD water supplies are not reliable on their own, but the entire portfolio is crucial and provides a very reliable water supply to meet the needs of the community.

### **Current Rate Structure**

The current rate structure consists of two components: a bi-monthly base charge and a volume charge that is tiered. The current rates are reflected in the table below:

		<b><u>Bi-Monthly</u></b> <b><u>Rates</u></b>
Single Family Residential Base Charge		<b>\$77.69</b>
Multi Family Residential Base Charge		<b>\$58.27</b>
Non-Residential Base Charge		
	5/8	<b>\$86.74</b>
	3/4	<b>\$105.62</b>
	1	<b>\$161.59</b>
	1&1/2	<b>\$291.87</b>
	2	<b>\$453.33</b>
	3	<b>\$721.37</b>
	4	<b>\$1,225.44</b>
	6	<b>\$1,910.57</b>
Volume Charges		
	per unit	per unit
	0-6 units	<b>\$4.19</b>
	7+ units	<b>\$8.65</b>
<b>Other:</b>		
	Hydrant Meter	<b>\$8.65</b>
	Out of Area Charge	<b>\$12.34</b>

The current rate structure was established in 2020, without further action, these rates will sunset in July 2025 and this would have a negative effect on revenues as consumption is unlikely to returned to pre-drought levels, and sourcing costs along with labor and construction are all anticipated to increase significantly over the rate period. The following chart shows annual consumption since 2011.

#### Total Water Use in Acre Feet

<b><u>Year</u></b>	<b><u>2011</u></b>	<b><u>2012</u></b>	<b><u>2013</u></b>	<b><u>2014</u></b>	<b><u>2015</u></b>	<b><u>2016</u></b>	<b><u>2017</u></b>	<b><u>2018</u></b>	<b><u>2019</u></b>
	852	838	888	807	703	672	718	725	680

<b><u>2020</u></b>	<b><u>2021</u></b>	<b><u>2022</u></b>	<b><u>2023</u></b>	<b><u>2024</u></b>
<b>744</b>	717	645	629	611

## **Revenue Requirements**

A review of the OCSD revenue requirements is a key step in the rate design process. The review includes an analysis of annual operating revenues under the current rates, operation and maintenance expenses, capital expenditures, transfers between funds, and reserve requirements. This section of the report provides a discussion on projected revenues, O&M, capital expenditures, the capital improvement financing plan, the 2025 Financial and Rate Setting Policies, and revenue adjustments required to ensure the fiscal sustainability of the Water Fund.

### **Revenues from Current Rates**

The current water rate structure consists of two components: a bi-monthly base rate (differentiated between residential Single-Family Residence and Multi-Family and non-residential customers) and a volume charge (which is tiered for all customers). The proposed 2025-2030 rates will consist of the same components.

### **O&M, Source of Supply, and Capital Expenses**

The Fiscal Year 2024-25 budget and a list of escalation factors assumed inflation rate of 4% for the study period were used as the basis for projecting O&M costs shown in **Exhibit 1**.

The Source of Supply costs are pass-through wholesale water costs billed directly by the Flood Control District annually for the wholesale costs of supplying Lopez water and State water as shown on **Exhibit 2**. Fiscal Year 2024-25 budget wholesale costs are projected for each year of the study period and provide for future costs, such as the Delta Conveyance Project and the increased costs related to the Lopez Dam litigation are expected during the rate study. Provisions of Government Code 53756 will be utilized to pass-through the actual wholesale costs of the Source of Supply.

The OCSD has a long-term capital improvement plan (CIP) which documents necessary projects over the next ten years. The CIP is attached as **Exhibit 4** to this report. The CIP will be funded through a combination of pay-as-you-go, grant, and debt financed projects. The rates needed to fund the CIP will be phased in over ten fiscal years, beginning with \$230,046 in Fiscal Year 2025-26, \$265,000 in Fiscal Year 2026-27, and \$310,000 in Fiscal Year 2027-28, \$350,000 in Fiscal Year 2028-29, and \$400,000 in Fiscal Year 2029-30 as shown in **Exhibit 3**.

### **Reserve Requirements**

Currently, the OCSD has a reserve balance of \$2,522,776 in the Water Fund. This represents approximately 9 months of total operating expenses. The OCSD hereby establishes a minimum reserve target of 3 months of total expenses to meet cashflow requirements. This reserve requirement only ensures the working capital to support the operation, maintenance, and administration of the Water Fund. Establishing other reserves for emergencies, rate stabilization, capital, or other purposes are being proposed at this time with the 2025 financial and rate setting policies. A good practice for an agency our size, located near active earthquake faults, with level of assets owned and maintained by OCSD, would be to keep two million dollars in emergency reserves.

## **Proposed Financial Plan**

A pro forma projection with the proposed rates is presented in **Exhibit 12**. To ensure that the Water Fund will have adequate revenues to fund operating costs and capital expenditures, it is proposed that the OCSD adjust revenues by implementing a phased increase in the rates to meet the Revenue Requirement for Fiscal Year 2025-26 through 2029-30. The base rate would be increased each year per the following schedule (8%, 8%, 9%, 8%, 8%). Pass-through and escalation costs of the wholesale water supplies are incorporated into the rate structure. These proposed revenue adjustments would occur upon adoption of the rate ordinance and subsequent annual adjustments with each July billing period. The proposed revenue adjustments would enable the OCSD to fund O&M, complete the planned capital projects, and maintain emergency and operating reserves above the minimum reserve levels.

## **Rate Design**

Proposition 218 (California Constitution Article 13D) states that:

1. A property-related charge (such as water rates) imposed by a public agency on a parcel shall not exceed the funds required to provide the property related service.
2. Revenues derived from the charge shall not be used for any other purpose other than that for which the charge was imposed.
3. The amount of the charge imposed upon any parcel shall not exceed the proportional cost of service attributable to the parcel.
4. No charge may be imposed for a service unless that service is actually used or immediately available to the owner of the property.
5. A written notice of the proposed charge shall be mailed to the record owner of each parcel at least 45 days prior to the public hearing, when the agency considers all written protests against the charge.

Proposition 218 ensures that water rates cannot be “arbitrary and capricious”, meaning that the rate setting methodology must be sound and that there must be a nexus between costs and the rate charge. The OCSD ensures that all aspects of Proposition 218 are followed and that it creates rates that charge customers equitably. To keep up with the ever-changing legal requirements related to Proposition 218 and case law, the OCSD is making changes to its rate design to ensure compliance with Proposition 218. These include:

1. The bi-monthly base charge for Single Family Residence, Multi-Family, and Non-Residential.
2. Tying the cost of Tier 1 directly to the wholesale cost of the Lopez water supply.
3. Tying the cost of Tier 2 directly to the wholesale cost of the State water supply.
4. Including all reserve requirements, O/M, labor, and anticipated future capital costs in the rate structure.

For this analysis, consumption and peaking characteristics of customers as well as water supplies of the OCSD were analyzed to appropriately allocate costs between customer classes. O&M expenses and Capital Expenditures are predominantly fixed costs and are the basis for the bi-monthly base charge. To reflect the differing maintenance, peaking, and storage

demands of the customer classes, the bi-monthly base charge is allocated between Residential and Non-Residential customer classes. The Residential customer class is further allocated between Single-family (SFR) and Multi-family (MFR) which is currently 75% of the SFR rate will increase to 80% based on the historical usage since 2021. The Non-Residential customer class is further allocated based on meter size by historical cost ratio allocation percentages.

The cost of the wholesale water supply for Lopez and State water is the basis for consumption or volumetric charge. Tier 1 (0-6 CCF) is tied directly to the wholesale cost of the Lopez water supply. Tier 2 (above 6 CCF) is tied directly to the wholesale cost of the State water supply. These charges are applied equally to all customer classes.

**Water Rate Methodology**

The following table breaks down the customer classes by accounts, dwelling/non-residential units, and unit equivalents:

	<b>Accounts</b>	<b>Units</b>	<b>Unit Equivalents</b>
SFR	1,890	1,890	1,890
MFR	210	1,234	987
Non-Residential	155	171	539
<b>Total</b>	<b>2,255</b>	<b>3,295</b>	<b>3,416</b>

An annual increase of 0.67% in unit equivalents is assumed as the growth rate. The Multi-family base charge was 75% of the SFR charge and will increase to 80% in the proposed rates and the Non-Residential base charge is set off the SFR charge using the cost ratios for each meter size. Meters that serve multiple residential units from a single meter are charged the Multi-family base charge for each unit. Meters that serve multiple non-residential units from a single meter are charged the non-residential base charge for each unit.

The following table shows the volumetric or consumption charge calculation for Lopez water (Tier 1) and State Water (Tier 2):

	<b>Tier 1 Lopez Water</b>	<b>Tier 2 State Water</b>
	(0-6 CCF)	(above 6 CCF)
Annual Cost in 2023	\$608,933	\$1,222,913
Usage in CCF (unit)	131,987	130,793
Cost per CCF (unit)	\$4.61	\$9.35
FY 2025-26 Rate	\$4.61	\$9.35

OCSD has a water supply contract with the Flood Control District for 303 acre feet annually from Lopez reservoir. This equates to 131,987 CCF which is used every year and provides between 50% and 40% of OCSD total water usage. This allotment provides each customer with up to 6 CCF bi-monthly. OCSD also has a water supply contract with the Flood Control District for up to 750 acre feet annually from the State Water Project. The rate for State Water

is determined by taking the annual cost of State Water and dividing it by the total annual water sales minus the Lopez water sales (131,987 CCF). This rate is then applied to all usage above 6 CCF. The proposed rates are set below the cost of service for FY 2025-26 which incorporate appropriate adjustments throughout the 5 year rate period.

Other charges are included in the table, below:

Description	Charge
Meter Testing Charge	\$150 per test Refunded if meter reads fast
Out of District Administrative Charge	\$11.98 per dwelling/non-residential unit
Hydrant Meter Charges	\$9.35 per unit of water
Backflow Preventer Inspection Charge	Actual costs from the County for the backflow preventer inspection program will be passed through to those properties with backflow preventers

**Exhibit 12** shows the combined water rate summary for the five-year period of this Rate Analysis.

**Water Rate Comparison**

**Exhibit 12** provides a comparison of the OCSD current and proposed water rates to other Community Services Districts and Cities in the county. The comparison shows the SFR rates at the current average usage of 12 CCF.

**Pass-Through Costs**

This Rate Analysis also provides for the following adjustments that are allowable in the future under State Laws<sup>1</sup> governing water rate increases.

- An increase (or decrease) that is based on charges for wholesale water charges.
- Notices of any adjustments will be provided at least 30 days before the increases will go into effect as required by California Government Code Section 53756.

The adjustments shall not cause water system revenues to exceed the cost of providing water service to the community.

---
